

A background image of a young woman with dark hair tied back, smiling and looking down at a white envelope she is holding. She is wearing a white top with small dark polka dots. The background is a bright, out-of-focus window.

Camu Student Admissions: From Application to Acceptance

Higher education must find a better way to address the changing landscape of institutions, by investing in a system that automates and streamlines the student admission process seamlessly.

Getting accepted to top universities and colleges across the globe has never been this easy for prospective students, until today. The “digital age” has granted higher education numerous opportunities to adapt, grow, and excel within key academic and administrative areas. **And institutions are rightfully taking advantage of the smart, agile solutions available in the market to improve their overall operational efficiency.**

The growing number of students seeking admissions in academic institutions is noticeably putting tremendous pressure on administrative bodies to govern the system/systems effectively. Previously, throngs of students would queue outside (registrar office) institutions to collect or submit application forms, which invariably led to problems in managing applications, handling queries, and ultimately, short-listing the right candidates. Today, approximately 90% of applications are submitted online! However, the task of tracking, processing and evaluating said applications is still labour-intensive and hence prone to data, notification, and communication errors.

With Camu Student Admissions Module, institutions can:

Tailor-make application forms to establish criteria for admission, **such as tuition fees, transcripts, test scores, interviews, recommendations, and more**

Collect, validate, and finalise **all documents online**

Automate email communication with the applicant **at every stage to keep them informed and engaged**

Generate and email **admission offers automatically**

Collect the confirmation **fees online**

Collaborate with leads, **all the way through**

Setting the Admission Context

Every institution has its own unique set of admission requirements, be it a high school diploma, aptitude test score, internship letter, coursework, etc. Depending on whether it's a bachelor's degree or master's degree, these requirements will differ.

Camu's reliable Admissions Module helps institutions establish their eligibility criteria, by creating a comprehensive application form, set with proper terms and conditions.

Institutions may define the documents required, determine fee structure by programme, set cut off scores, and more. Applicants can then fill in the data in a simplified manner, pay the application fee, and submit all mandatory documents, swiftly. At every stage of the application process, the institute is able to communicate and collaborate with the prospective student.

Reviewing Applications

An integral part of the admissions process is reviewing and validating thousands of applications that come in. Traditionally, this would mean spending time and man-power doing the work manually. However, Camu Admissions Module automates the entire process by enabling the speedy collection, collation, tracking and management of all applications. Institutions can easily review documents online, cross-check mandatory documents, validate and confirm acceptance of each document, and record final documents. In this way, institutions can quickly assess the volume of applications, better understand the workload of admissions counsellors, and reorganise application count by counsellor, if necessary. Now, institutions no longer need to print, store, collect and file forms - which results in not only cost savings but also man power savings!

Evaluating Candidates

Matching programme requirements to student qualifications is the third critical stage in ensuring student-institutional eligibility. Camu Admissions Module is precise, accurate, and flexible, helping institutions pick the right candidates for the right set of courses. From processing interviews and entrance test results, to reviewing academic and health records, the system automatically shortlists students and publishes the admissions results. Powerful communication, collaboration and automation tools enable administrators to track the candidate's history and status, send automatic email alerts and reminders, across websites and mobile devices.

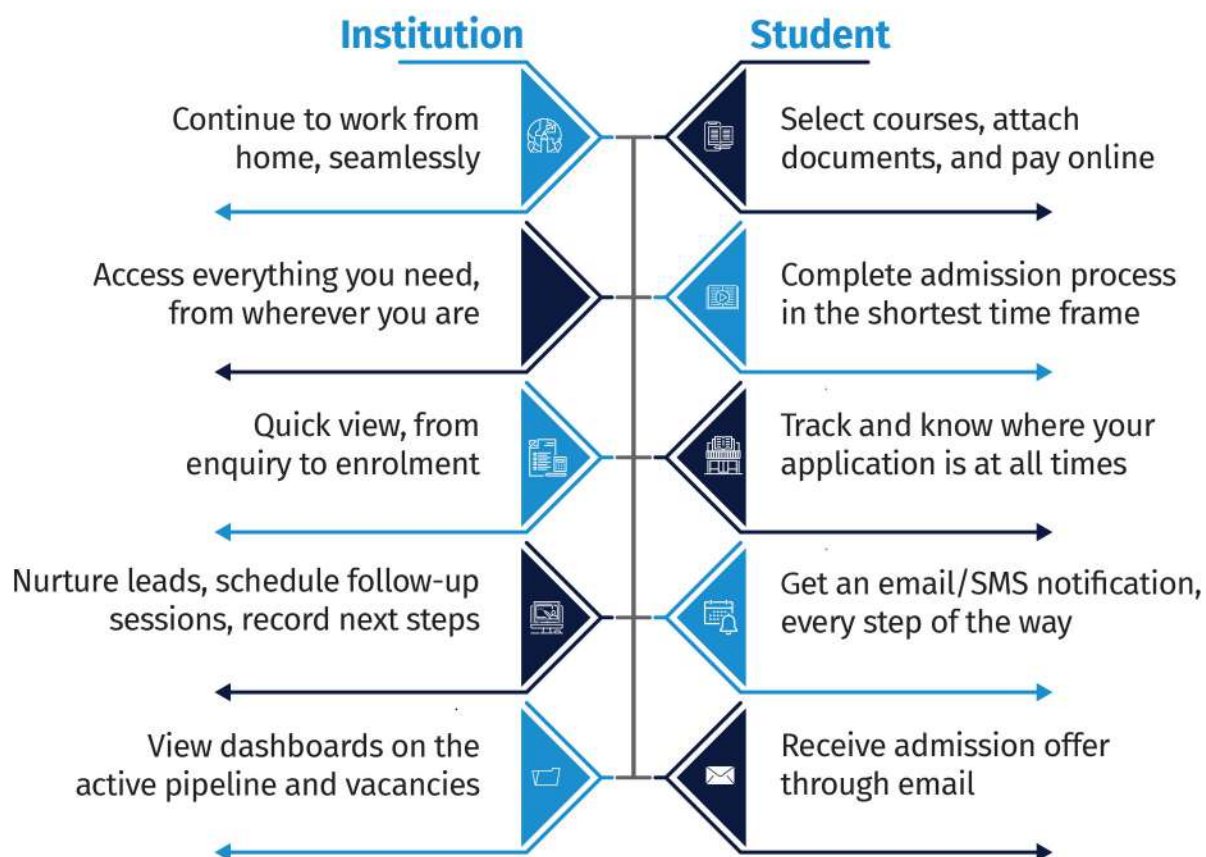

Confirming Admission

This final stage involves crucial aspects such as provisionally admitting the student, generating a student ID, automatically emailing the admission offer, and collecting the confirmation fee. After the student is officially admitted, Camu Admissions Module sets the joining date and makes provisions for student counselling. Of course, all progress can be viewed on the dashboards, via the mobile app.

**Now institutions
no longer need to
print, store,
collect and file
forms - which
results in not
only cost savings
but also man
power savings!**
